

ATTPAC VERSION 6.0

Sage ACCPAC[®] ERP Add In Product.

WHAT IS ATTPAC?

ATTPAC allows users to integrate non ACCPAC subledger modules e.g. payrolls, billing systems etc. with their ACCPAC General Ledger. This removes the hassle of rekeying subledger journals and ensuring a reliable audit trail. ATTPAC is compatible with Sage ACCPAC ERP - single or multi-currency.

ATTPAC creates ACCPAC General Ledger batches from either:

(i) A simple comma separated value (CSV) file of batch journal entries.

or

(ii) The Attache Payroll General Ledger posting journal report.

FEATURES IN VERSION 6.0

ATTPAC version 6.0 operates with all Sage Accpac ERP supported databases including Pervasive.SQL, Microsoft SQL and Oracle.

Supports operation in the ACCPAC Windows, Internet Explorer browser and Portal desktops.

ATTPAC version 6.0 is developed using the ACCPAC Software Development Kit and is a tightly integrated ACCPAC third party solution.

ATTPAC allows simple set up and use with multiple ACCPAC and/or Subledger companies.

Option to automatically import, then open and display the converted subledger batches in the ACCPAC General Ledger following conversion.

TECHNICAL SPECIFICATIONS

Requirements:

Sage ACCPAC ERP for Windows 6.0 System Manager and General Ledger modules, using one of the following databases:

Pervasive.SQL
Microsoft SQL Server
Oracle

Previous versions of ATTPAC are available for AAS 5.6 and prior

Attache Business Partner Payroll Version 1.26.201 and above if integrating with Attache.

If integrating with a non ACCPAC subledger via CSV, your subledger must be compatible with a query or reporting tool capable of creating the specified CSV batch file format.

Microsoft Windows XP or above

Internet Explorer 7 or above
